

+++++

++ Running the CS586 Project++

+++++

This README provides instructions on how to run the CS586 project using the provided JAR file.

Prerequisites: Java Development Kit (JDK) installed on your system.

+++++

++ Instructions ++

+++++

1. Download the JAR File: Ensure that you have downloaded the cs586Project.jar file to your local machine.

2. Open Terminal/Command Prompt: Open a terminal or command prompt window.

3. Navigate to the Directory: Use the cd command to navigate to the directory where the CS586_PP_LVV.jar file is located.

For example:

cd path/to/directory

4. Run the JAR File: Execute the following command to run the JAR file:

java -jar CS586_PP_LVV.jar

+++++

++ Additional Notes ++

+++++

Make sure to replace App with the correct main class name if it's different in your project. Ensure that the cs586Project.jar file is located in the same directory as specified in the command.
